FREELANCE EXPERIENCE

Employee & Student Attendance Management Platform | [\[github\]](#)

- Built and deployed a backend for a school attendance management platform (Node.js, Express.js, MongoDB, AWS EC2) used by 20 teachers and 200+ students to mark and track daily attendance, replacing manual paper registers.
- Designed REST APIs for attendance marking, absence reporting, and an admin dashboard for school staff.
- Reduced manual attendance tracking time by 30% and operational costs by 80%.

PROJECTS

Hirevo- AI Mock Interview Platform | [\[github\]](#)

- Developed a full-stack real-time interview platform with live audio streaming and speech-to-text transcription using Google Cloud Speech API.
- Implemented WebSocket-based bi-directional communication for seamless audio streaming and instant AI response generation.
- Built a dynamic interview engine where each question is generated at runtime based on the candidate's previous response, enabling adaptive, context-aware interview sessions instead of predefined question flows.

Retrieval-Augmented Chatbot with Dynamic Knowledge Bases | [\[github\]](#)

- Engineered an intelligent chatbot using LangChain, OpenAI APIs, and Retrieval-Augmented Generation (RAG) architecture. Achieved 90% accuracy in context-aware responses by implementing semantic search with vector embeddings and Supabase vector store.
- Implemented modular vector embedding system that enables rapid adaptation to any domain by simply updating training data, cutting deployment time for new use cases by 75% compared to traditional chatbot development approaches.

Take up the floor - AI-Powered Speaking Practice Platform | [\[github\]](#) [\[live link\]](#)

- Designed and built web application helping users improve impromptu speaking through daily practice with AI-generated feedback.
- Integrated Razorpay payment with server-side signature verification, idempotent webhook handling, percentage-based coupon discounts, and middleware-enforced subscription gating and daily usage limits.
- Built a processing pipeline that transcribes audio via Whisper with word-level timestamps, computes speaking metrics (words-per-minute, long-pause detection, filler-word frequency), and generates structured coaching feedback via LLM evaluation.

Gita wisdom guide - AI-Powered Life Guidance Platform | [\[github\]](#) [\[live link\]](#)

- Built an AI-powered guidance platform that allows users to ask real-life questions and receive responses grounded in the teachings and principles of the Bhagavad Gita.
- Designed prompt constraints to keep responses grounded in the Bhagavad Gita and reduce generic, unsupported AI advice.

EDUCATION

Chandigarh Engineering College, Mohali | Aug 2023 – Expected 2027

Bachelor of Technology in Information Technology

PROFESSIONAL SKILLS

- **Programming Skills:** JavaScript, Java, Python, C, C++, Data Structures and Algorithms, SQL
- **Frameworks & Libraries:** React, Node.js, Express.js, React Native, Expo
- **Databases:** MongoDB, PostgreSQL
- **AI & Machine Learning:** LangChain, OpenAI APIs, Retrieval-Augmented Generation (RAG), Vector Embeddings
- **DevOps & Tools:** Docker, Linux, Git, GitHub, AWS(S3, EC2, Lightsail)
